

Terradrive Piling & Foundations Ltd is a privately owned independent piling contractor specialising in geotechnical engineering and off-site construction.

“SENUBO allows me to record my piling records immediately after it is installed. Before using SENUBO I had to record the pile details in a notebook and transfer those notes into our Daily Record Sheets at the end of the day – now I simply send a text message after each pile is finished.”

Gerry Hamill
Site Foreman
Terradrive P+F Ltd

“SENUBO provides a Real Time view of piling production and site activities - this allows us to manage with current information without interrupting site with phone calls for updates.”

Terence Dowling
Contracts Manager
Terradrive P+F Ltd

SENUBO is an online platform which allows company networks and groups to communicate centrally using any device. Knowledge workers across multiple locations collaborate and respond in real time.

THE CHALLENGE...

- To capture and record site production information in Real Time;
- Record and report HSEQ information with photographs
- To deliver an IT solution for users who had no experience or training in using IT systems;
- To collect and store information in one central repository for future reference and analysis such as is required in Estimating and post contract review;
- To have a collaborative platform to record and review all site updates and communications;

...THE SOLUTION

- Terradrive’s site foremen send production information via a simple predefined SMS format;
- Management view updates to production and site activities, including disruptions and delays, in Real Time via the SENUBO web interface;
- Managers also remain updated via mobile devices such as Smartphones and Tablet PCs while away from head office;
- SENUBO analytics provide tabulated and graphical viewpoints of site activities, including HSEQ reporting and observations;
- Estimators and cost managers have up to the minute information at the click of a button.

THE DIFFERENCE ...

- Terradrive are now able to manage their business using the latest up to date information, without having to interrupt or disrupt site personnel;
- SENUBO automatically updates the Terradrive databases saving on administration and reporting costs;
- There is a more connected and aware culture at Terradrive – people know that their colleagues have seen their updates. Conversations are now about what needs to happen rather than spending time talking about what has happened.
- Estimating is now based on actual historic performance rather than some perceived guesstimate of what may happen.
